Q1 Attempt Any 2.

1) what is the use of android manifest file?

→ The AndroidManifest.xml file is main configuration file of android application. it provides essential information about the app to android operating system.

Uses:-

- Declare Package name of the application.
- Request Permissions
- Specific minimum Android version required.
- Define app icon, theme, & metadata.

2) Explain any two features of android?

→ 1) Open Source:- Android is open source operating system, which means developers can access & modify its source code freely.

2) Multitasking:-

Android allows users to run multiple applications simultaneously such as listening to music while browsing the internet.

3) what is mobile operating system?

→ Mobile OS is software that manages the hardware & software resource of mobile devices such as smartphones & tablets.

Manages memory & Processor

Runs Mobile applications

Controls device hardware (Camera, GPS, wifi).

- 4) what is use of android resource file?
→ resource file are used to store non-code resources of an application.

Q2 Attempt any 4.

1) what mobile apps & Types of mobile APPS?

- mobile app is software designed to run on smartphones, tablets, or mobile device.

Types :-

- 1) Native apps :- apps developed for a specific operating system using platform specific language. Ex :- Android, ios - swift.
- 2) web apps :- Applications accessed through mobile web browsers. Ex :- Gmail web version
- 3) Hybrid apps :- apps developed using web technologies but Package as mobile apps.

2) Explain mobile APPS Design & Development Process?

→ Development Process :-

1. idea & Planning :- target users, identify app purpose.
2. UI/UX Design :- app interface & user experience.
3. Development :- write code using programming language.
4. Testing :- Test app for bugs, performance, & compatibility.
5. Deployment :- Publish app on platforms like google play store or Apple App store.
6. Maintenance :- update the app & fix issues regularly.

3) Compare different mobile operating systems.

Feature	Android	ios	windows Phone.
Developer	Google	Apple	microsoft
Source	Open-Source	Closed-Source	Closed-Source
Devices	many manufacturers	only Apple device	Limited devices.
APP store	Google Play store	Apple APP store	microsoft store
P-language	Java/Kotlin	swift/objective-c	C#.

5) Explain factors in developing mobile applications?

→

1. user interface (UI):- APP should be easy to use.
2. Performance:- The APP must load quickly & run smoothly.
3. Security:- Protect user data & privacy.
4. Device Compatibility:- APP should work on different screen size & devices.
5. Battery Consumption:- APP should not drain battery quickly.

4) Explain Android Architecture?

→ Consist of five layers.

1- Linux Kernel :- core of Android, handles hardware, memory, security.

2- Hardware Abstraction layer :- provide standard interface betⁿ hardware & software.

3- Android Runtime :- Executes Android applications.

4- Application Framework :- Provides API for developers like Activity Manager, Notification manager, Content Providers.

5- Applications: Top layer containing apps like Phone, Contacts, Browser.
